**Alpentonholz Pahler** is a personally managed tonewood company with many years of experience sourcing and preparing timber for the making of quality stringed instruments. We specialize in European spruce (*Picea abies*) which grows on the upper slopes of the Alps, in mixed and protected forests at about 3,000 feet above sea level, as well as in maple (*Acer pseudoplatanus*). With a base in Mittenwald as well as in Westerholzhausen, Bavaria we are very well placed to find the best wood. The wood is cut according to moon phases where appropriate; the best time is a descending and waning moon.

Alpentonholz (Alpine Tone Wood) was founded by violin maker and forester Andreas Pahler. After training at the Mittenwald Violin Making school he worked in various restoration and violinmaking workshops. He then went on to study forestry at the Technical University in Munich where he specialized in wood technology. Before founding Alpentonholz, Andreas worked for a London-based timber consultancy, where he personally selected fine tonewood. Today, Alpentonholz is internationally respected as a source for excellent tonewood, selected by top makers and crafted into award-winning instruments.

***The smell of the workshop, the feel of old wood...***

If you're like us, these are more than just pictures - they're a way of life!

At Howard Core Company, we go to great lengths to ensure that our products are of the highest quality and will fulfill your needs when you are giving your valuable time and effort to your next masterpiece.

Whether the instrument you are repairing is student or master quality, we have what you need to do the job! If you don't see what you need in these pages, call us!

# Old Wood®

Grounds, Oil Varnishes &amp; Natural Colours

## 1700 System

*These finishing products are causing quite a stir among discerning luthiers and woodworking craftsmen. Based upon the original recipes of the old Italian violin-makers, the 1700 System utilizes grounds to prepare the wood, then a special varnish used in tandem with its organic pigment glaze to give the wood a rich, beautiful finish. Made in Spain.*

### WHY SHOULD YOU BUY THE OLD WOOD 1700 SYSTEM?

**1. ADDS VALUE TO THE INSTRUMENT** - the 1700 system provides the instrument with an elegant and extraordinary look, adding depth, tone, and a dichromatic effect, enhancing the wood.

**2. SAVES TIME** - Everything needed to finish the instrument is right here! Also, no milling of colors (hours saved!)

**3. RELIABILITY** - Homogeneous results, every time - no color variations.

**4. COST-PERFORMANCE RATIO** - when properly used, the cost of the Old Wood 1700 system is generally between 1% and 5% of the total cost of the instrument! See below for how many instruments can be finished with one 60 cc bottle of:

Italian Golden Ground - 10 violins; Imprimatura - 6 violins; Doratura - 8 violins;  
any Oil Natural Color - 10-11 violins; Varnish - 5 violins.

### WE HAVE USED THIS SYSTEM IN OUR OWN SHOP, WITH TREMENDOUS RESULTS!!

## FOR FURTHER INFORMATION:

Since we do not finish instruments ourselves, our knowledge of techniques, formulas, etc. is necessarily "second hand", and we do not feel qualified to give advice. There are several excellent books on this subject which we can recommend and they are:

- Violin Varnishes by Hammerl. They make the products! (see pg. I-6)
- Sections of Art and Method of the Violinmaker, Violinmakers Notebook, and Violin Making Step by Step books by Henry Strobel also contain worthwhile varnishing information. (pg. I-8)

All these books, plus many more, are available from us. Please look in the book section of this catalog.

**DOWNLOAD MORE INFORMATION  
ABOUT THE OLD WOOD SYSTEM  
FROM OUR WEBSITE!**

**STAINS AND PRIMERS**

If the unfinished instrument is to have a beautiful basic color, it should be stained before varnishing. But since the hardness of wood can vary, thus absorbing the stain unevenly, it is recommended that the basic instrument should be pre-treated first to ensure that the color is attractively even.

**INSTRUCTIONS FOR PRE-TREATING THE WOOD**

Dissolve about 30 g of gelatin powder in a liter of warm water and then heat until the solution is clear and thin. Apply the warm solution evenly with a bristle brush, leave to dry completely and sand down very carefully with a fine sandpaper. The various stains described below can then be applied.

**INSTRUCTIONS FOR APPLICATION OF WATER-BASED STAINS**

Water-based stains are available in some twenty shades. Dissolve contents of the bag, following the instructions on the label. To make the color lighter or deeper, change the proportion of water used. Apply the stain solution evenly to the cleanly sanded instruments using a sponge or brush. Wipe off excess stain with a dry rag.

**JOHA® ANTIQUE STAIN #421**

Stain #421 - antique gray-brown is a ready-mixed oxidation stain. After application, the color changes under the effect of air and daylight from being colorless to antique gray-brown. This stain is applied exactly as described above. Once the required color has been reached, gently sand with a fine sandpaper and apply one coat of basic varnish. This prevents further modification of the color. Ideally, one should carry out a test stain and varnish to see what the final result will be, since the colors will vary with different types of wood. This stain particularly draws out timber rings.

**JOHA® STAIN #423 & JOHA® STAIN #402 M**

Stain #402 M is a rich brown, ready-made stain which should be used if a dark instrument is required. Stain #423 is a ready-made orange stain made from natural dyes. Use as water-based stains.

**AN INTRODUCTION TO OUR VARNISHES:****SPIRIT VARNISH**

Spirit varnish has always been the varnish most commonly used for stringed instruments. It dries quickly, thus allowing a daily coating. The varnish must be applied quickly, however, in order to prevent the varnish from clouding, especially on color varnish. Every coat must be thoroughly dried before the next coat is applied in order to prevent cracks from materializing later. (Press hard on the varnish with your thumb for a few seconds. If it fails to make a print, then you can apply the next coat.) Spirit varnish can be smoothed well with pumice stone or rottenstone and polished.

**PROPOLIS MIXED VARNISH**

This is an Italian type varnish which, in spite of being a very soft varnish, dries well. After it has been left to dry for a few days it polishes very well. As the name suggests this varnish is partly made up of propolis and is particularly fine quality. Its natural color is an antique yellow. This varnish should be smoothed with rottenstone and polished after it has dried completely, at least 30 days.

**OIL VARNISH, STANDARD QUALITY**

This varnish applies very well. It should be diluted a bit with balsam turpentine (the thinner that is listed with the oil varnishes), despite the fact that it takes a little longer to dry. (Test this also with your thumb to see if it is dry.) Contrary to popular opinion, in the long run, this varnish actually becomes somewhat harder than spirit varnish. You can smooth this varnish with pumice stone or rottenstone and work it to a gentle shine with polish and oil.

**VOLATILE OIL VARNISH**

An outstanding oil varnish made with balsams and volatile oils which dries much faster than normal oil varnishes. As a result, however, it is not as easy to apply as normal oil varnish. Because it contains propolis, it stays elastic for a long time and allows the wood to vibrate properly. However, this means that volatile oil varnish may remain sensitive to heat and pressure even after years. After the last coat has dried (thirty days to six weeks) the volatile oil varnish can be smoothed with tripoli powder and polished.

**RETOUCHING VARNISH**

This is ideal for repairing damaged varnish on musical instruments. It is made using selected resins and a special solvent, thus providing excellent adhesion to damaged areas. In order to achieve better cover, retouching varnish has a slightly stronger color. The composition of this special varnish means it is ideal for repairs both to spirit and oil varnishes. The special thinner must be used with the retouching varnish. All colors can be mixed with each other. This varnish should be thickly dabbed or applied to the area to be repaired; leave to dry completely and then sand smooth to match the remaining varnish.

**COLOR EXTRACT**

Color extract is a liquid, light-resistant, transparent color for tinting colorless varnishes, although it can also be used with all other spirit, oil and synthetic resin varnishes. The colors can be mixed with each other, so that any desired shade may be matched. The liquid may be added directly to the varnish. This color extract is superior to spirit and oil soluble powders as it is much more resistant to light.

A list of dyeing resins, their color and solvents is shown below. This is a general overview and is intended as a guide. Please experiment yourself, using potash, ammonia solution, iron chloride, etc. A detailed description of the resins and dyeing resins is given in the book "VIOLIN VARNISH" by Hammerl. (See book section - item # BOOKH102.)

DYEING RESIN	COLOR	SOLVENT	COMMENTS
Acaroid Resin	red	spirit	
Alkanna Root or alkanet	red	spirit turpentine volatile oils	may turn slightly bluish
Alicarin = madder	as for madder root but more highly concentrated		
Aloe	yellowish-brown to brown	spirit water	heat to dissolve heat to dissolve
Asphalt	brown	spirit - acetone mixture add spirit	make into paste
Logwood extract	black	water	Boil up logwood extract + iron vitriol. Place wood in solution and if possible boil with it.
Campeachy Wood aka fogwood	dark red yellow	water spirit	heat to dissolve heat to dissolve
Catechu	warm brown brown to red-brown	water spirit	heat to dissolve heat to dissolve
Cochineal	red	spirit + spike oil	Reduce to powder and heat to dissolve. Caution: easily turns violet.
Curcuma Root	yellow	spirit	heat to dissolve
Dragon's Blood	red	spirit volatile oils	heat to dissolve heat to dissolve
Safflower	yellowish-orange yellow reddish-yellow	water + soda water + potash spirit	boil up boil up heat to dissolve
Pernambuco or redwood	Yellowish-brown to reddish-brown golden yellow	water + potash spirit	boil up heat to dissolve
Gallnut	black	water + iron chloride	boil up
Yellow Wood Extract liquid	yellow yellow	spirit water	readily soluble
Guaiacum	brown	spirit	heat to dissolve
Gambage	yellow	spirit	heat to dissolve Caution: TOXIC!
Kamala	golden orange orange	spirit water + potash	heat to dissolve heat to dissolve; when cool, add ammonia solution
Madder Root	red	spirit	prepare first in a small amount of ammonia solution
Orlean	yellow orange-red	water spirit	heat to dissolve heat to dissolve
Saffron (real saffron) in strands	yellow yellow	spirit water + borax	heat to dissolve heat to dissolve
Sandalwood	red to orange	spirit + copaiva balsam	heat to dissolve
Onion Skins	old yellow to old gold	water + potash or water + soda	heat to dissolve heat to dissolve

### Manufacturer suggestion:

Please transfer varnish from metal shipping container into glass jar for maximum shelf life.

**VARNISH COLOR REFERENCE**

Each varnish sample on this page was created in-house using the following procedure:

- 15-year air dried ribs of similar natural color
- Hide glue ground applied a day in advance of first coat
- A total of 3 coats of varnish – 3-day dry time between coats of Spirit, and 6-day dry time between coats of Oil
